

# JGGL FINANCIAL STRATEGY

# ECONOMIC FOUNDATION

\$JGGL is more than a token.

It is the **foundation of JGGL creative economy.**

Each subscription

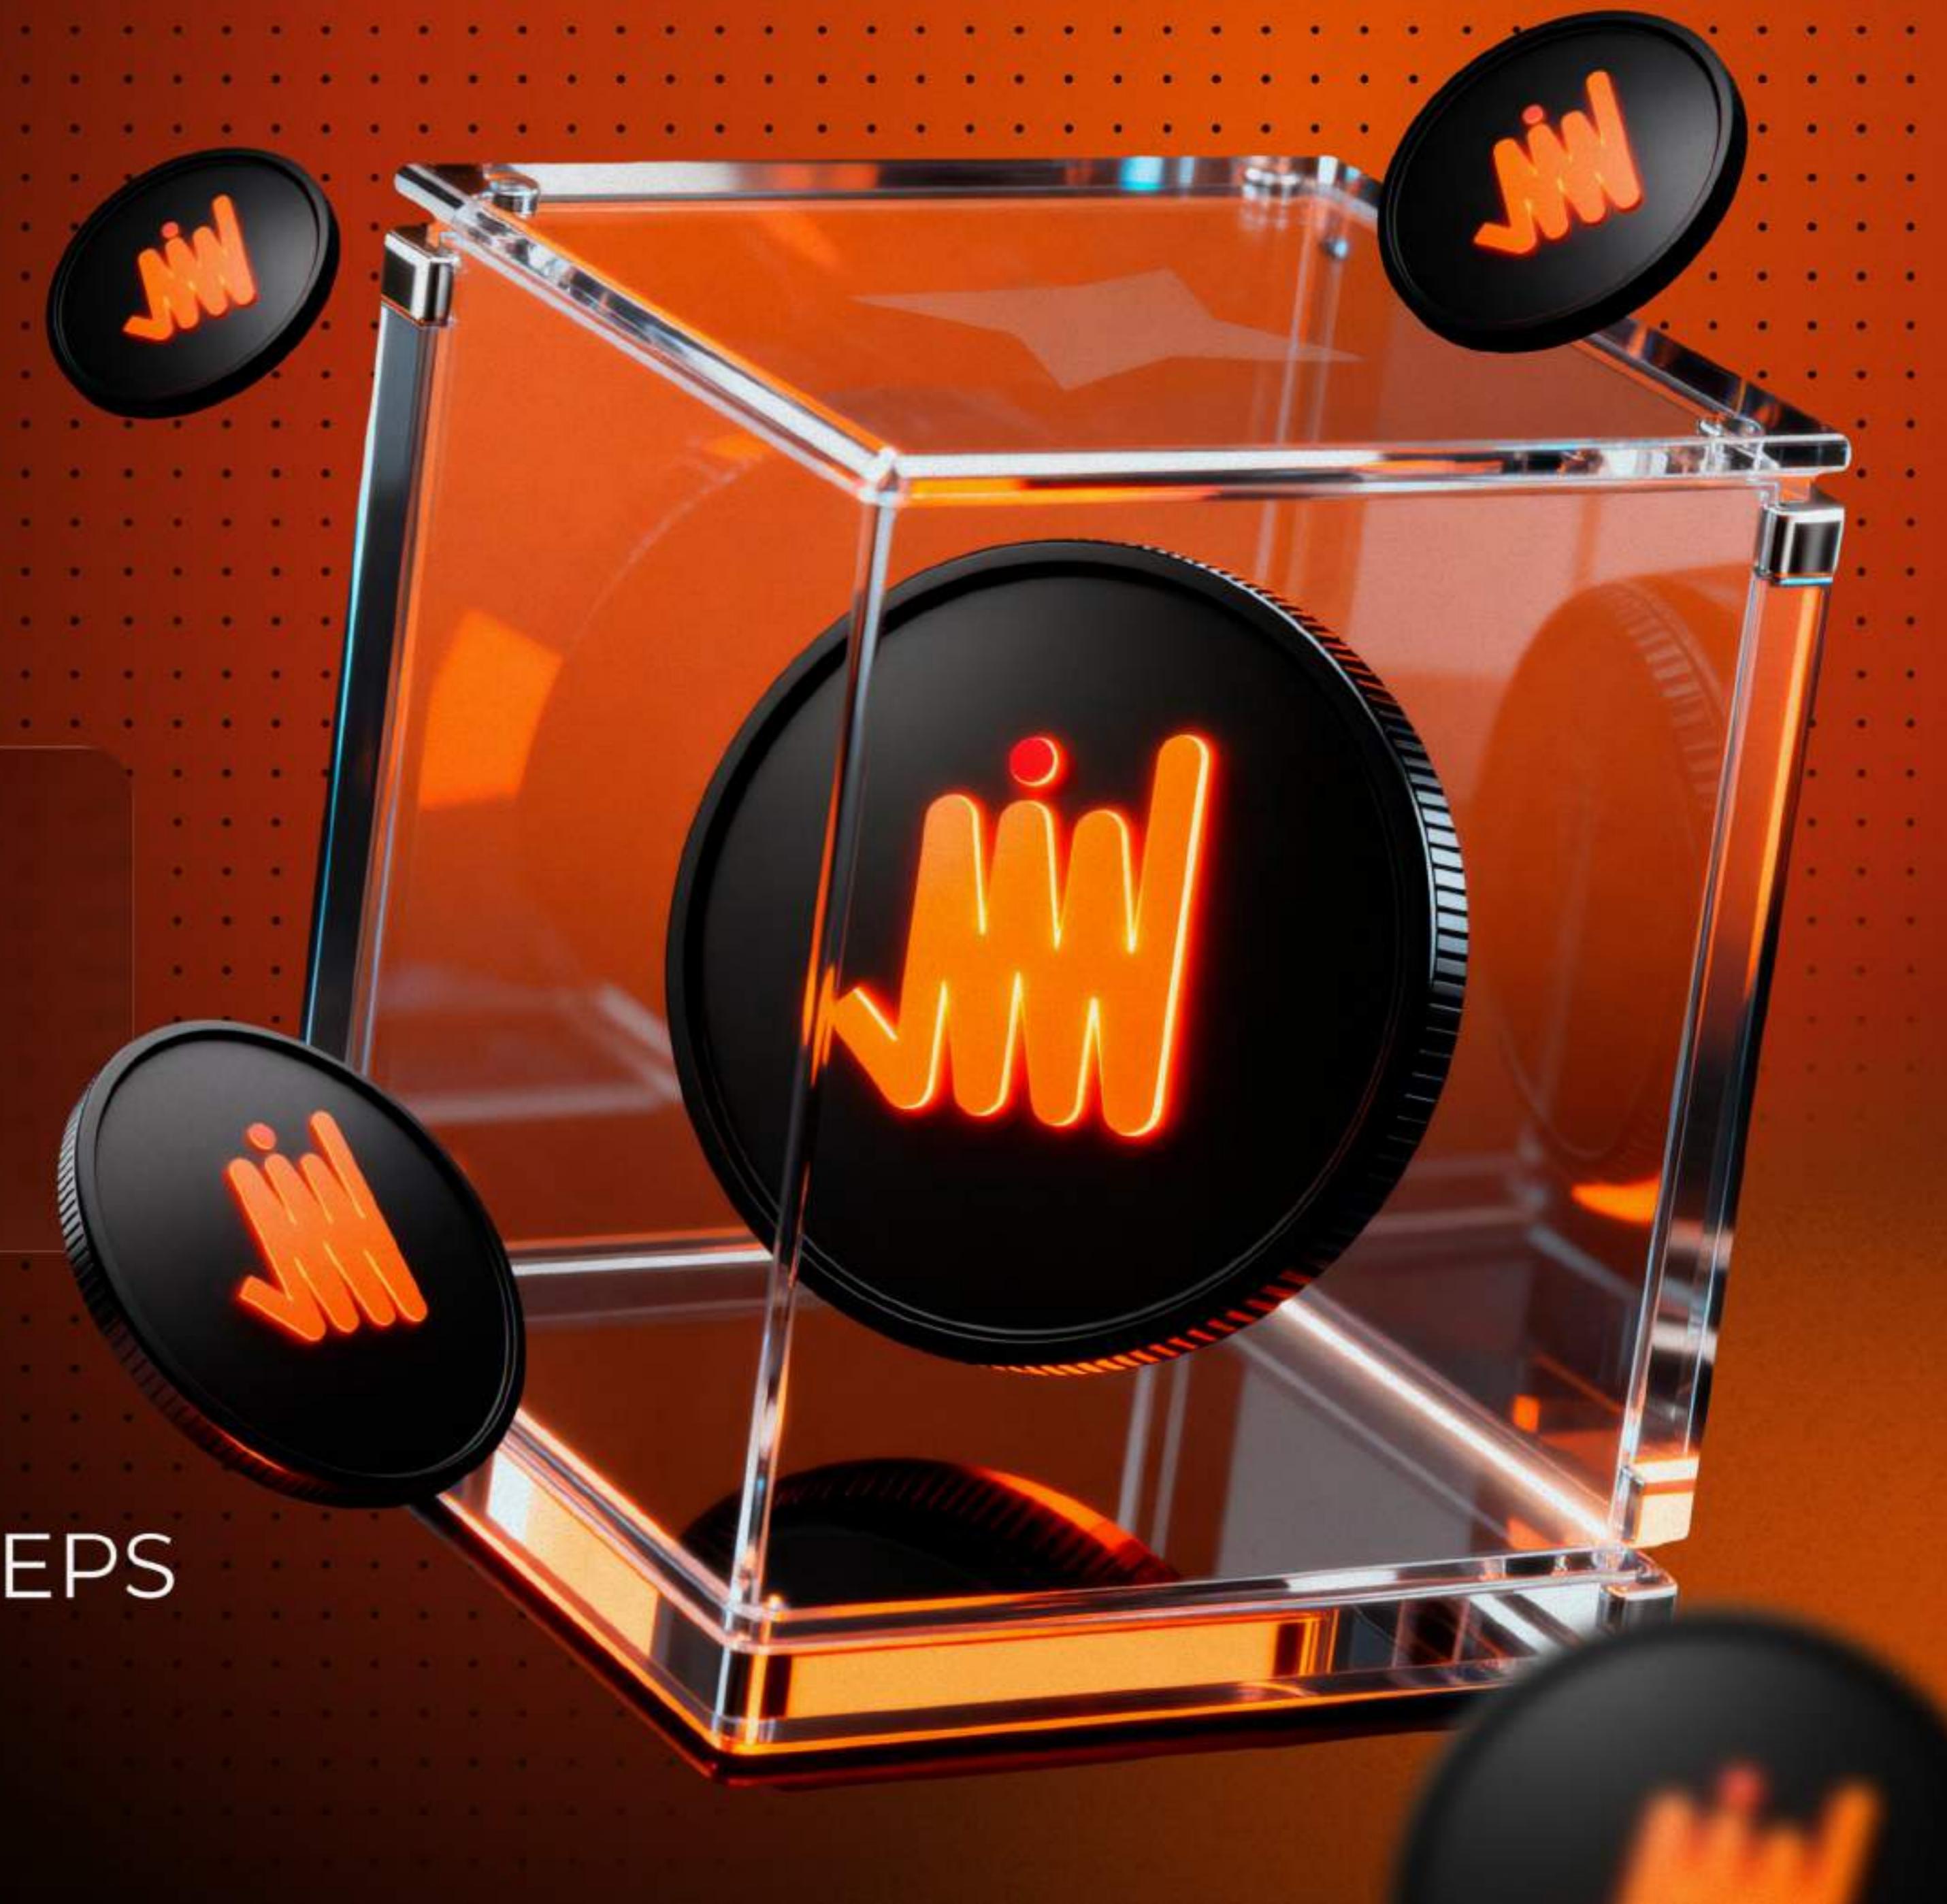

Each transaction

Each reward for creators

is done with the help of it.

**THIS IS THE ENERGY THAT KEEPS THE ECOSYSTEM MOVING**

# WHAT IS THE USER MOST LIKELY TO CHOOSE?

**\$10** via App Store / Play Market  
(Apple takes ~35% fee per payment)

VS

**\$6.5** via JGGL Token

**USERS CHOOSE THE TOKEN BECAUSE IT IS CHEAPER.**

## One-click token purchase

JGGL is purchased through built-in payment solutions, partner channels, and recommended entry points.

## No complex onboarding

Users do not need to understand the crypto market, trading, or exchanges.

**Simple logic:** Buy → Use.

TENS OF MILLIONS OF USERS WILL  
FUEL DEMAND FOR THE TOKEN.

EARLY INVESTORS ENTER BEFORE MOMENTUM BECOMES OBVIOUS.

# STEP 1: LISTING DECEMBER 25

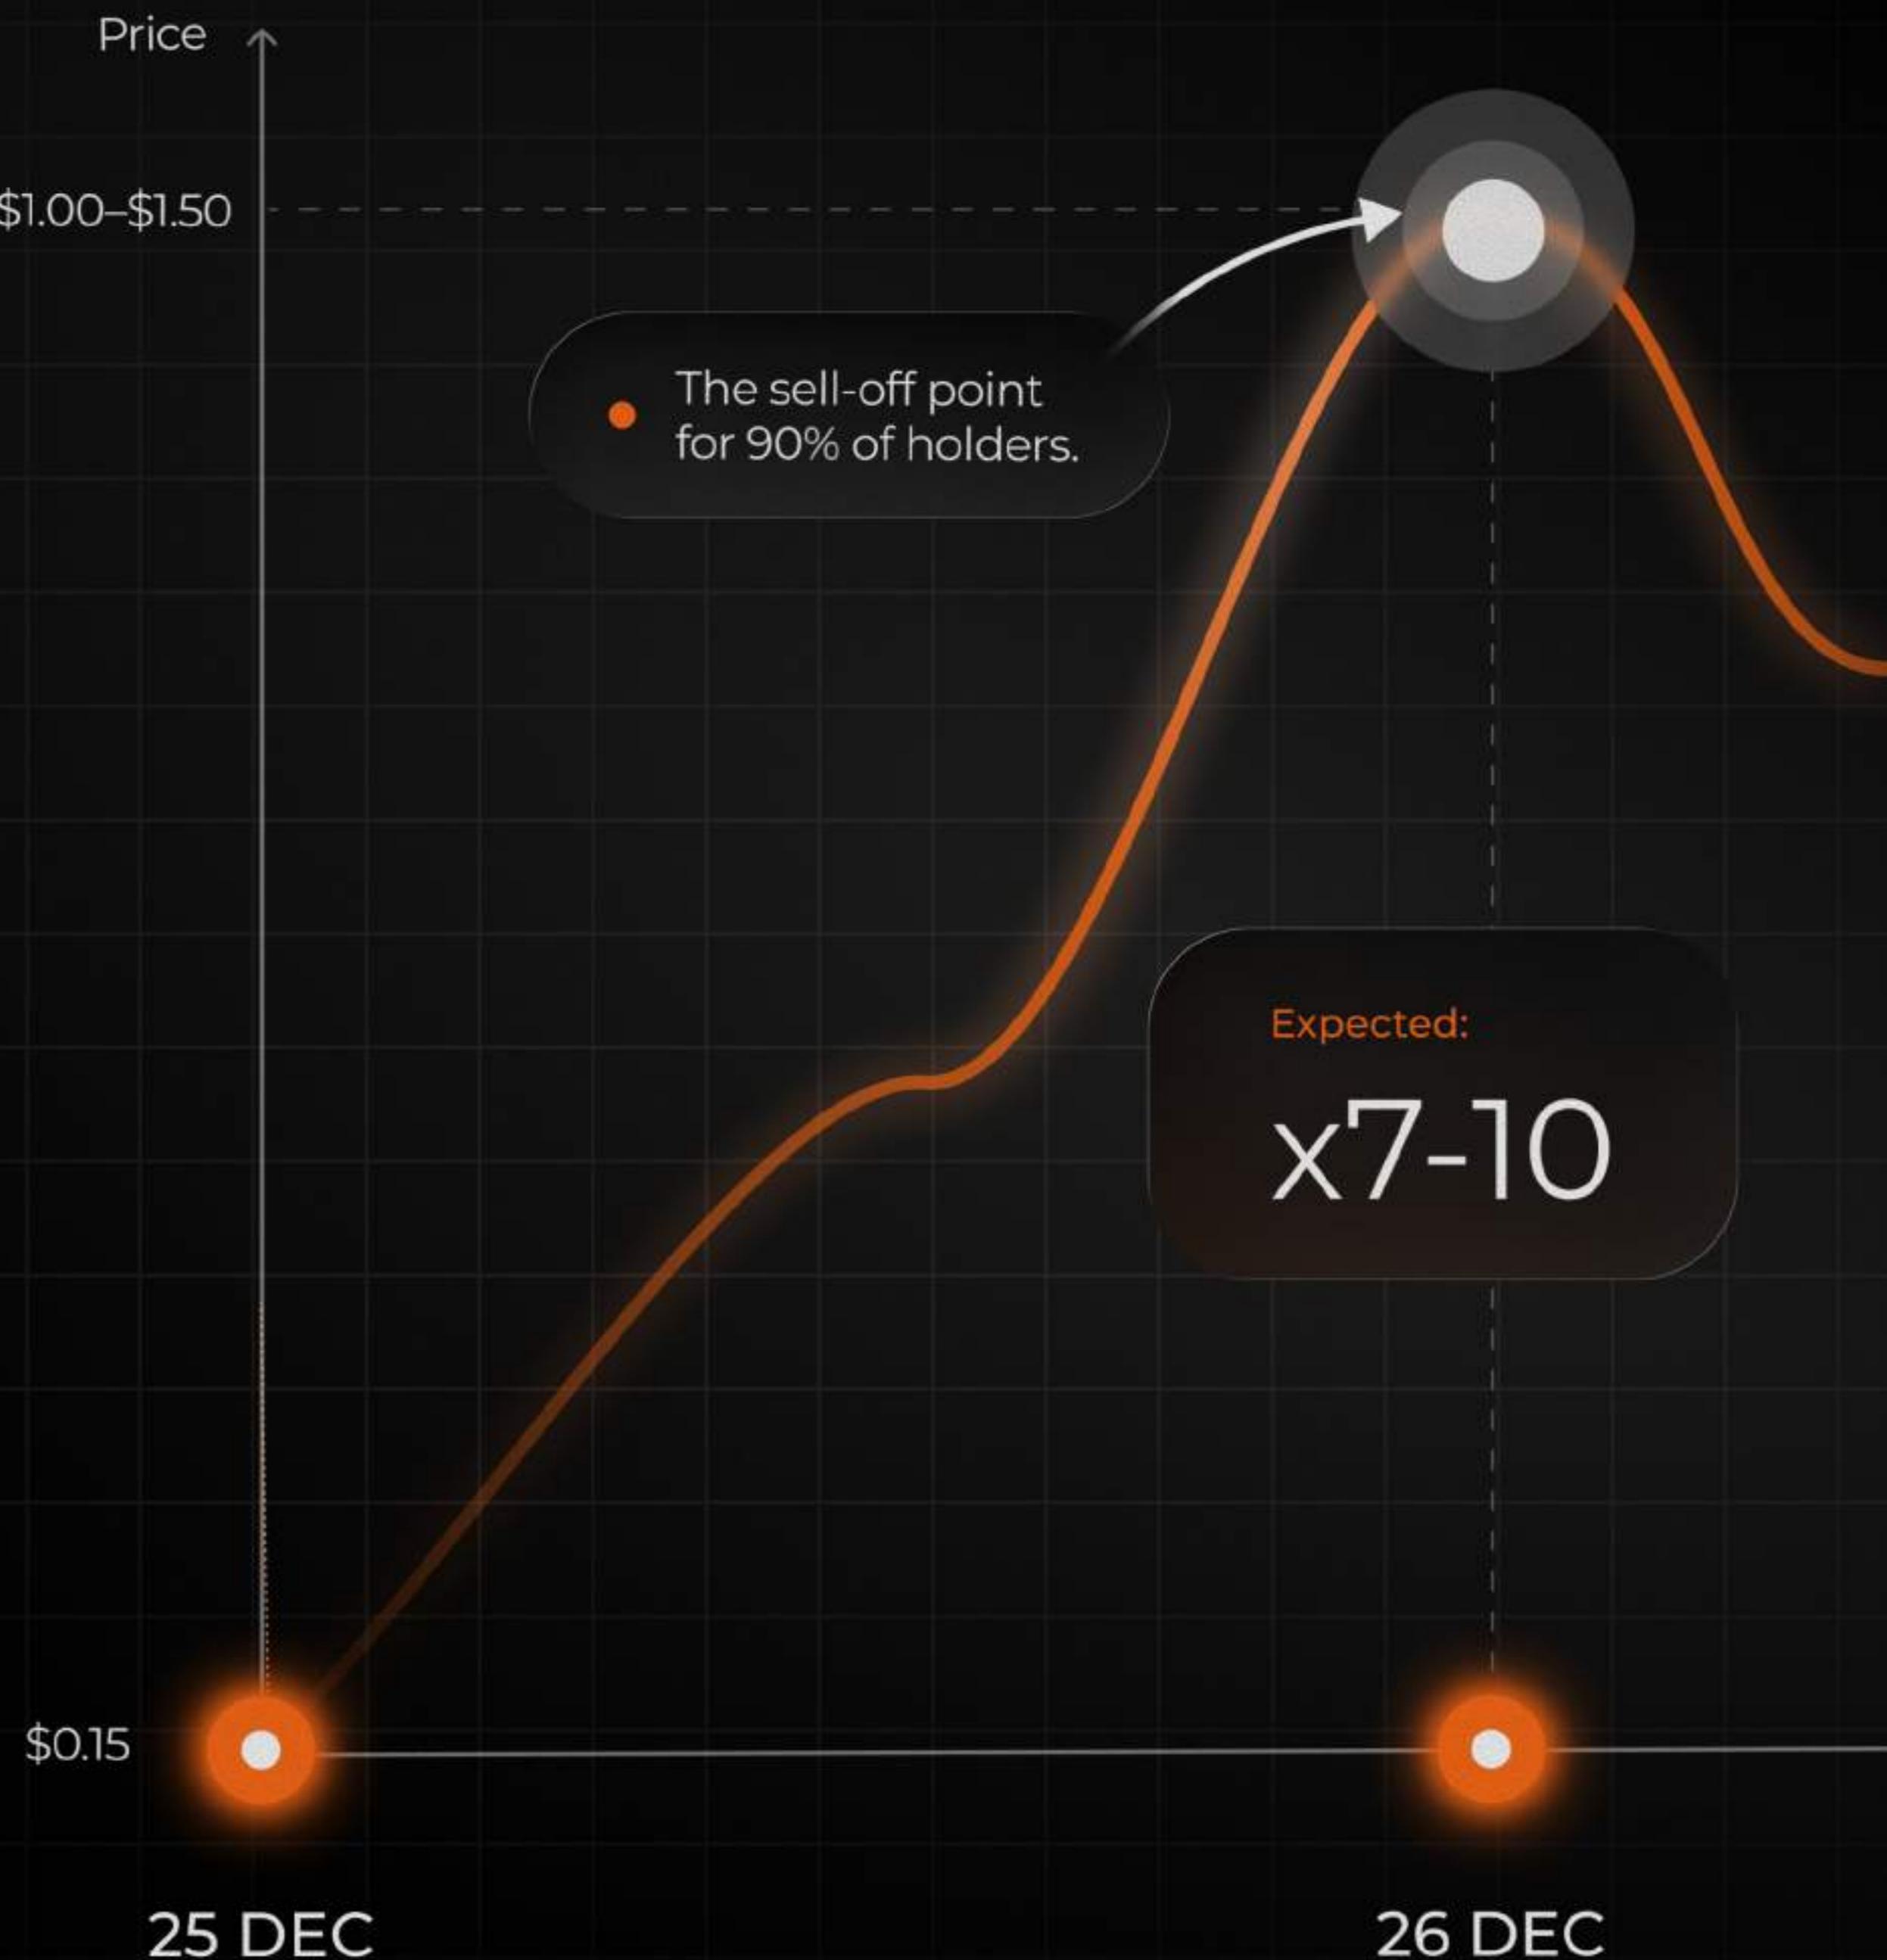

~\$0.50 Expected price in the first minutes

$\$0.15 \rightarrow \$0.50$  Impulse move (baseline)

\$0.50 → \$1.00–\$1.50 Impulse peak phase

Next, the market naturally moves into a **profit-taking phase**.

- We proactively explain how to act during the impulse phase
- We hold the token together with you
- We provide clear guidance on the next steps in advance

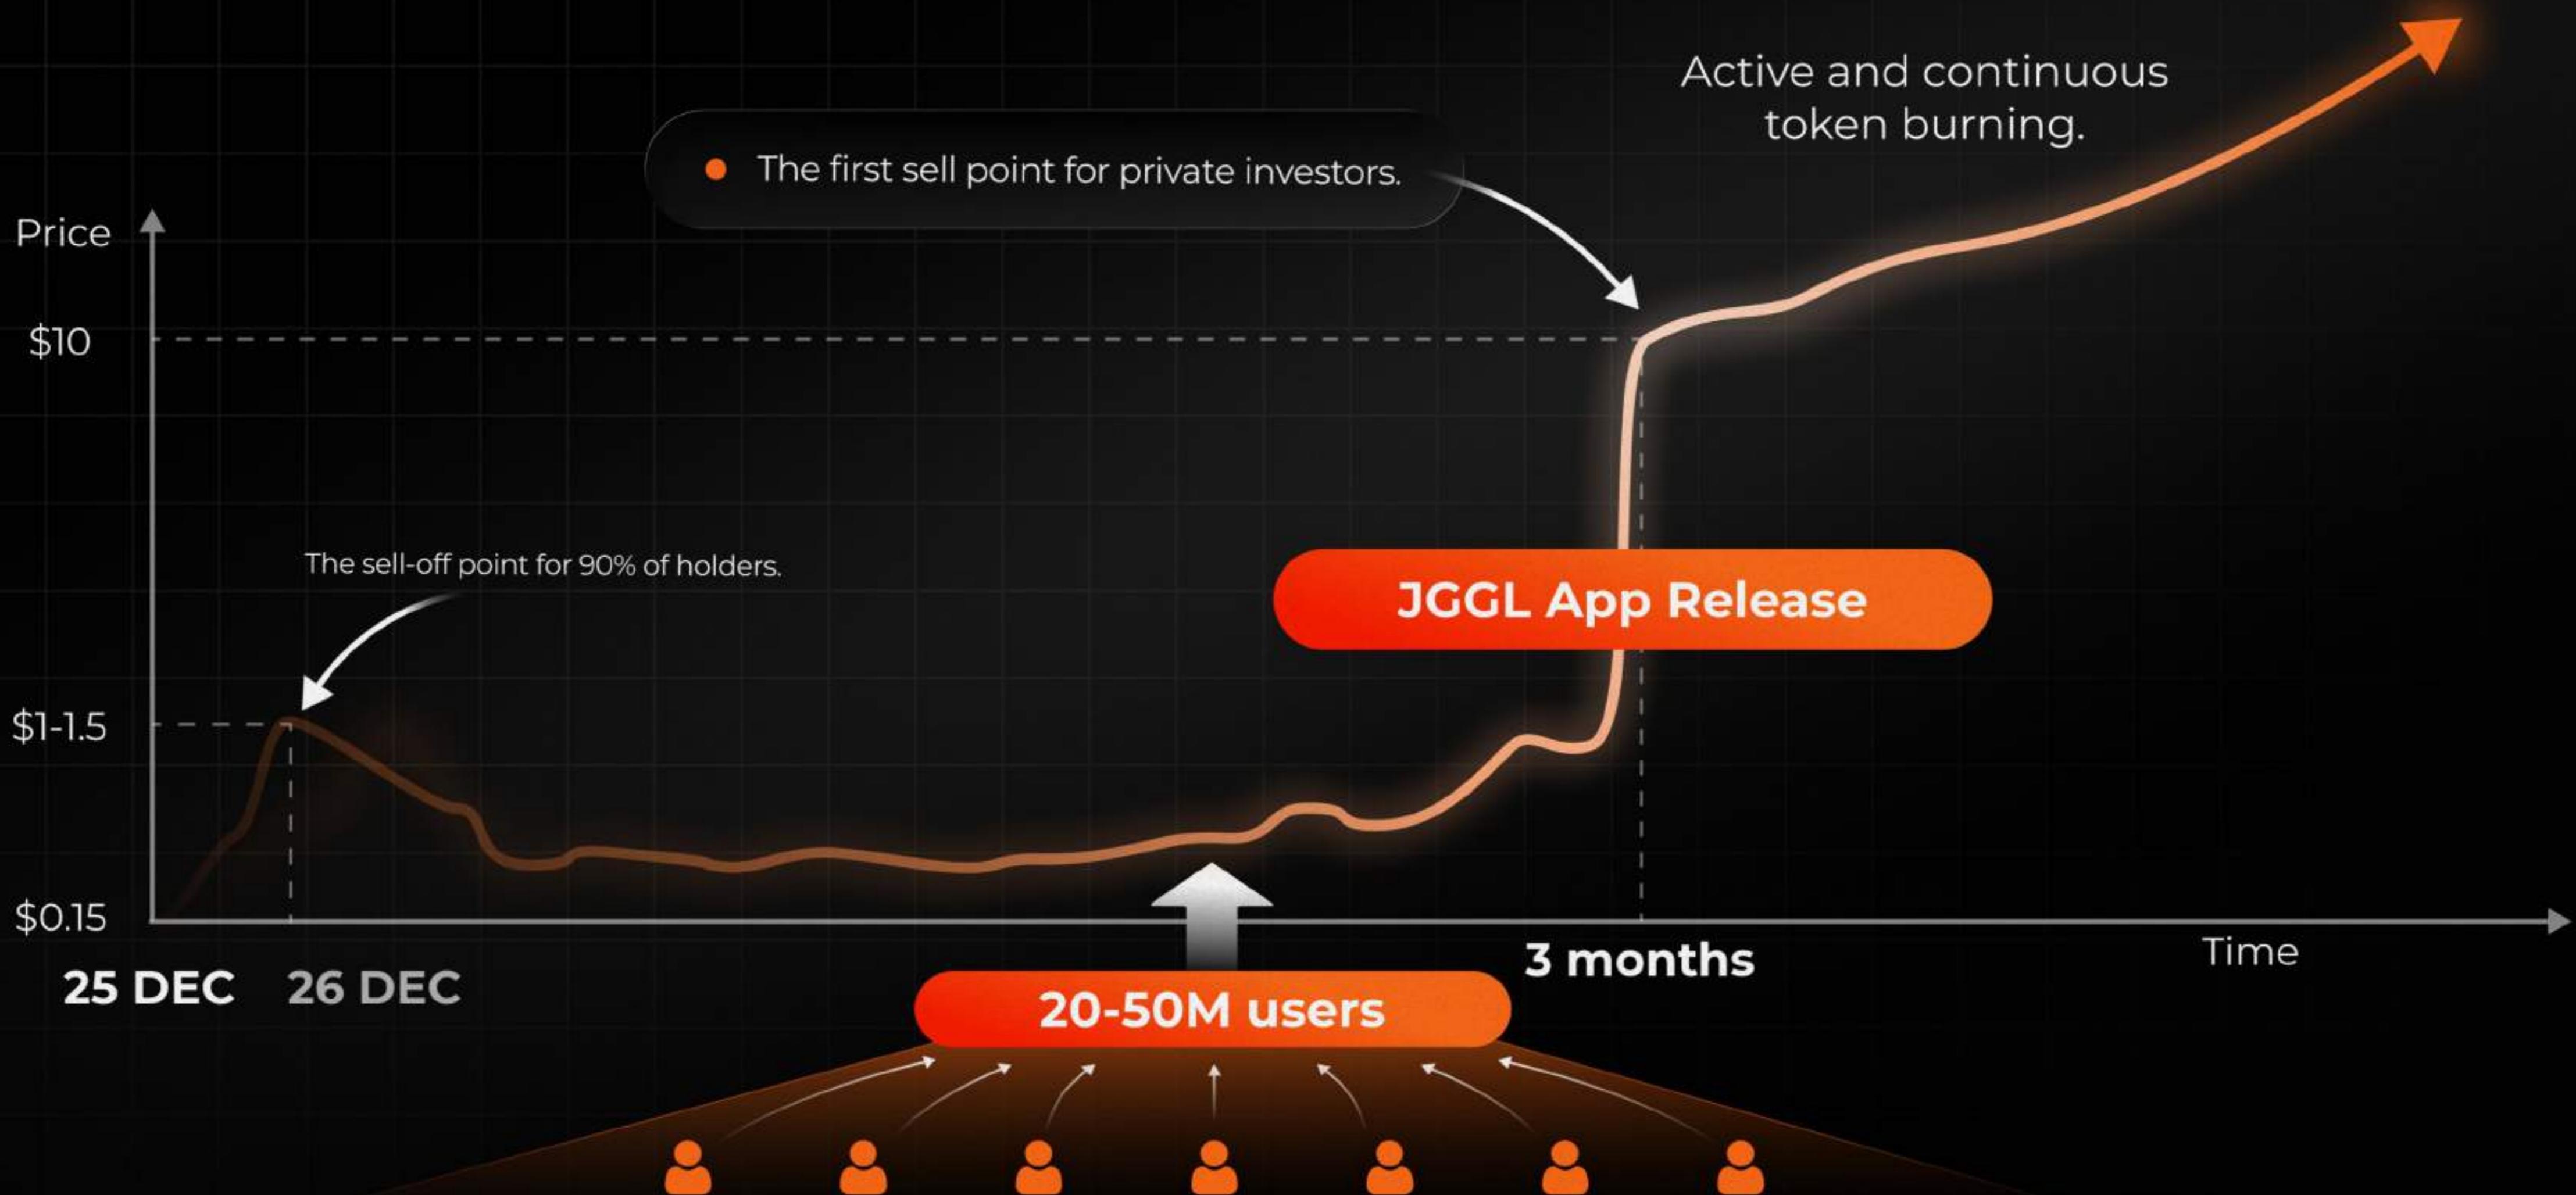

# STEP 2: PREPARATION PHASE CONTROLLED ORGANIC MARKET

Over these **3-4 months**, the project deliberately shifts into a **preparation and organic market mode** — without aggressive pumping or artificial price acceleration. After profit-taking, the price corrects — and a decline works in our favor.

# STEP 3: APP LAUNCH & SECOND PUMP

On the day of the app launch, a second pump to **\$10** occurs, followed by the **first profit-taking point for private investors**.

# PRICE REDUCTION AS A MECHANISM FOR ACCELERATED TOKEN BURN

Our goal is to **burn the maximum** possible amount of JGGL tokens from the market.

When the price is lower, users buy more tokens to pay for services.

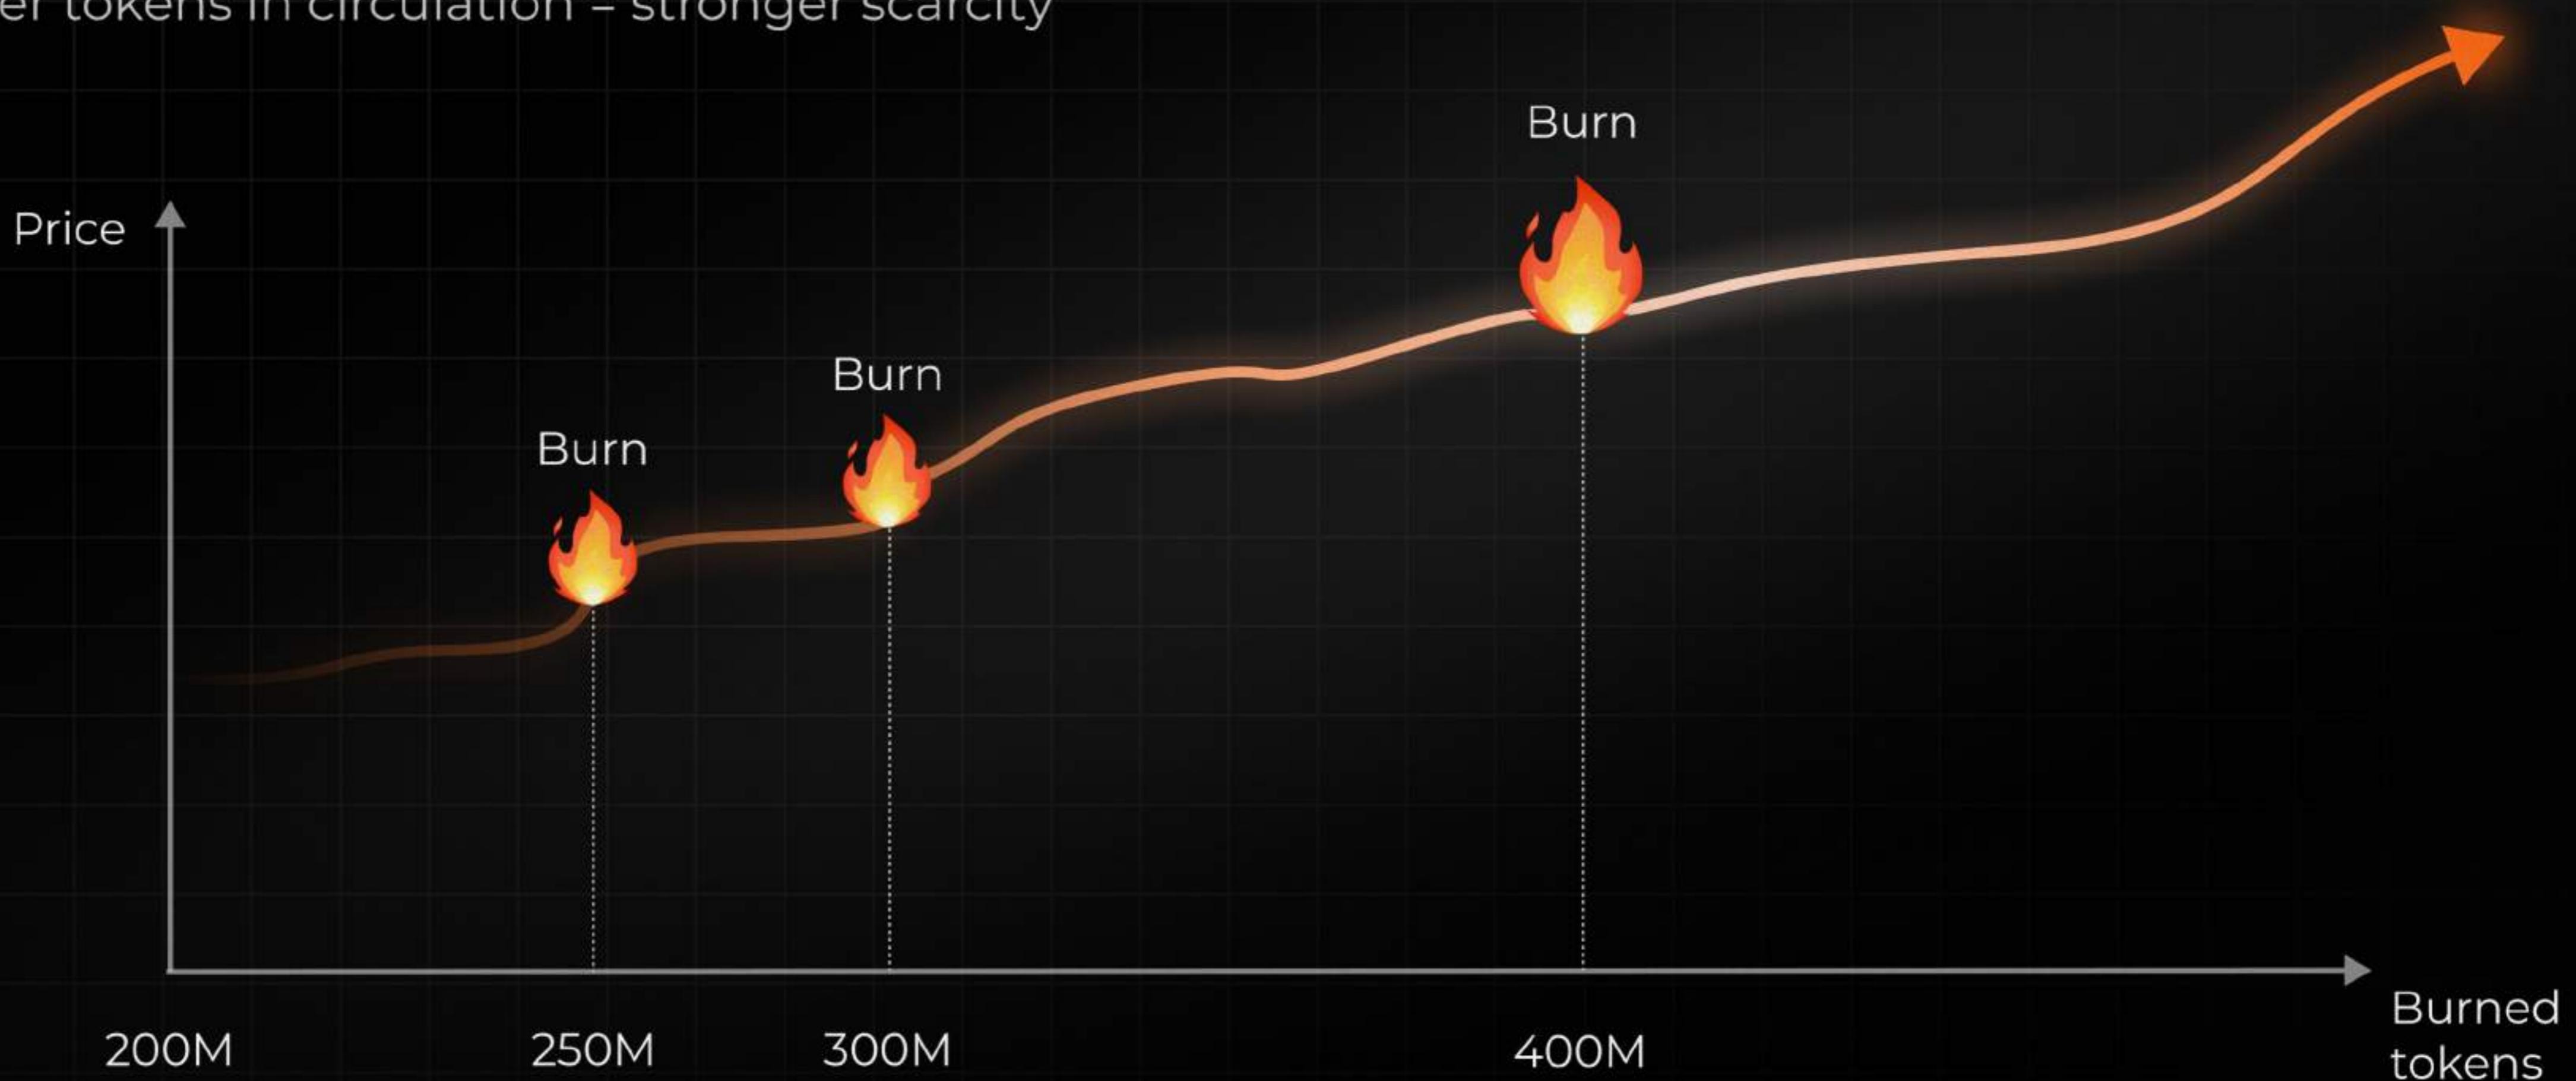

These tokens are burned and permanently removed from circulation.

As a result, the majority of the core tokens are held by **core holders and private investors.**

**EVERY USE OF JGGL DIRECTLY REDUCES THE TOKEN SUPPLY AND STRENGTHENS LONG-TERM SCARCITY.**

# 100% BURN → SCARCITY → LONG-TERM RANGE

- Tokens used to pay for subscriptions are burned and removed from the market
- The more users there are, the more payments occur — and the greater the burn
- Fewer tokens in circulation = stronger scarcity
